PREFACE

This reference book is the fourth volume in the set of books entitled **WHAT EVERY CHEMICAL TECHNOLOGIST WANTS TO KNOW . . . SERIES**. This compendium serves a unique function for those involved in the chemical industry—it provides the necessary information for making the decision as to which trademark chemical product is most suitable for a particular application.

The chemicals included in this fourth book of the series have their major function as conditioners, emollients, and lubricants, however, complete cross-referencing is provided for the multiple functions of all the chemicals.

The first section which is the major portion of each volume contains the most common generic name of the chemicals as the main entry. All these generic entries are in alphabetical order. Synonyms for these chemicals are then listed. The CTFA name appears alongside the appropriate generic name. The structural and/or molecular formula of the chemical is listed whenever possible. The generic chemical is sold under various tradenames and these are listed here in alphabetical order for ease of reference along with their manufacturer in parentheses. The *Category* subheading lists all the possible functions that the chemical can serve. Because of differences in form, activity, etc., individual tradenames of the generic chemical are used in particular applications more frequently. These are delineated in the *Applications* section. The differences in properties, toxicity/handling, storage/handling, and standard packaging are specified in the subsequent sections wherever distinguishing characteristics are known.

The second section of the volume **TRADENAME PRODUCTS AND GENERIC EQUIVALENTS** helps the user who only knows a chemical by one tradename to locate its main entry in section 1. The user can look up this tradename in this section of the book and be referred to the appropriate, main-entry, generic chemical name.

The third section **GENERIC CHEMICAL SYNONYMS AND CROSS REFERENCES** provides a way of locating the main entries by knowing only one of the synonyms. If the generic chemical is not in the volume, it will refer you to the volume in which it is contained.

The fourth section **TRADENAME PRODUCT MANUFACTURERS** lists the full addresses of the companies that manufacture or distribute the tradename products found in the first section.

The following is a list of the six volumes that comprise this series:

Volume I	Emulsifiers and Wetting Agents
Volume II	Dispersants, Solvents and Solubilizers
Volume III	Plasticizers, Stabilizers and Thickeners
Volume IV	Conditioners, Emollients and Lubricants
Volume V	Resins
Volume VI	Polymers and Plastics

This series has been made possible through long hours of research and compilation and the dedication and tireless efforts of Roberta Dakan who helped make this distinctive series possible. Our appreciation is extended to all the chemical manufacturers and distributors who supplied the technical information.

M. and I. Ash

NOTE

The information contained in this series is accurate to the best of our knowledge; however, no liability will be assumed by the publisher for the correctness or comprehensiveness of such information. The determination of the suitability of any of the products for prospective use is the responsibility of the user. It is herewith recommended that those who plan to use any of the products referenced seek the manufacturer's instructions for the handling of that particular chemical.

TABLE OF CONTENTS

Conditioners, Emollients, and Lubricants	1
Tradename Products and Generic Equivalents	337
Generic Chemical Synonyms and Cross References	363
Tradename Product Manufacturers	378

Acetylated lanolin (CTFA)

SYNONYMS:

Lanolin, acetates

CAS No.:

61788-48-5

TRADENAME EQUIVALENTS:

Acylan [Croda]

Lanacet 1705 [Henkel/Emery]

Ritacetyl [RITA]

CATEGORY:

Emollient, conditioner

APPLICATIONS:

Cosmetic industry preparations: (Ritacetyl); baby cosmetics (Acylan); hair preparations (Lanacet 1705); hypoallergenic cosmetics (Acylan); skin preparations (Lanacet 1705)

PROPERTIES:

Form:

Paste (Acylan)

Solid (Lanacet 1705; Ritacetyl)

Color:

Yellow (Acylan)

Composition:

100% active (Acylan; Lanacet 1705; Ritacetyl)

Ionic Nature:

Nonionic (Acylan; Lanacet 1705; Ritacetyl)

Acetylated lard glyceride (CTFA)

SYNONYMS:

Glycerides, lard mono-, acetates

CAS No.:

8029-92-3

TRADENAME EQUIVALENTS:

Grindtek AMOS 90 [Grindsted]

Tegin E 66 [Goldschmidt AG]

CATEGORY:

Lubricant, emollient, plasticizer, cosolvent, emulsifier

APPLICATIONS:

Cosmetic industry preparations: (Tegin E 66)

Food applications: food additives (Tegin E 66)

Industrial applications: (Tegin E 66); coatings (Grindtek AMOS 90); plastics (Grindtek AMOS 90)

Industrial cleaners: metal processing surfactants (Grindtek AMOS 90)

PROPERTIES:

Form:

Liquid (Grindtek AMOS 90; Tegin E 66)

Color:

Yellow (Grindtek AMOS 90)

Composition:

100% conc. (Tegin E 66)

Solubility:

Sol. in ethanol (Grindtek AMOS 90)

Sol. in paraffin oil (Grindtek AMOS 90)

Sol. in peanut oil (Grindtek AMOS 90)

Partly sol. warm in propylene glycol (Grindtek AMOS 90)

Sol. in white spirit (Grindtek AMOS 90)

Ionic Nature:

Nonionic (Tegin E 66)

HLB:

1.8 (Grindtek AMOS 90)

2-3 (Tegin E 66)

Acetyl monoethanolamide

SYNONYMS:

Acetamide MEA (CTFA)

Acetamide, N-(2-hydroxyethyl)-

N-Acetyl ethanolamine

N-(2-hydroxyethyl) acetamide

Acetyl monoethanolamide (cont' d.)

EMPIRICAL FORMULA:

STRUCTURE:

CAS No.:

142-26-7

TRADENAME EQUIVALENTS:

Incromectant AMEA-70 [Croda]

Lipamide MEAA [Lipo]

Schercomid AME, AME-70 [Scher]

CATEGORY:

Conditioner, solvent, humectant, clarifying agent, intermediate, coupling agent, dispersant

APPLICATIONS:

Cosmetic industry preparations: (Incromectant AMEA-70); beauty masks (Lipamide MEAA); conditioners (Incromectant AMEA-70; Schercomid AME, AME-70); creams and lotions (Incromectant AMEA-70; Lipamide MEAA); hair preparations (Schercomid AME, AME-70); shampoos (Incromectant AMEA-70); skin preparations (Schercomid AME, AME-70); wave sets (Lipamide MEAA)

Industrial applications: pigments (Schercomid AME, AME-70)

Pharmaceutical applications: antiperspirant/deodorant (Lipamide MEAA); depilatories (Lipamide MEAA)

PROPERTIES:

Form:

Liquid (Incromectant AMEA-70)

Clear liquid (Schercomid AME, AME-70)

Color:

Gardner 2.0 max. (Schercomid AME, AME-70)

Odor:

Mild organoleptic (Schercomid AME, AME-70)

Composition:

70% active in water (Incromectant AMEA-70; Schercomid AME-70)

95% active min. (Schercomid AME)

Solubility:

Sol. in alcohols (Schercomid AME, AME-70)

Sol. in diols (Schercomid AME, AME-70)

Sol. in glycol ethers (Schercomid AME, AME-70)

Sol. in glycols (Schercomid AME, AME-70)

Sol. in ketones (Schercomid AME)

Sol. in polyols (Schercomid AME, AME-70)
